

Package ‘MetaGxPancreas’

May 24, 2018

Type Package

Title Transcriptomic Pancreatic Cancer Datasets

Version 1.1.0

Date 2015-11-11

Author

Michael Zon <michaelzon7@gmail.com>, Vandana Sandhu <vsandhu1987@gmail.com>, Benjamin Haibe-Kains <benjamin.haibe.kains@utoronto.ca>

Maintainer Michael Zon <michaelzon7@gmail.com>

Description A collection of pancreatic Cancer transcriptomic datasets that are part of the MetaGx-Data package compendium.

duplicates

a list containing the names of patients that are believed to be duplicates across datasets

Description

The object is a list where each element is a patient ID that is believed to be a duplicate of a patient in another dataset. Patients are designated as duplicated if they have Spearman correlations greater than or equal to 0.98 with other patient expression profiles

Format

A list with 130 elements, each of which is a patient ID.

GRUTZMANN

GRUTZMANN Study Pancreatic Cancer Dataset

Description

An expression set object containing pancreatic cancer data

loadPancreasEsets	<i>Function to load pancreas cancer expression sets from the Experiment Hub</i>
-------------------	---

Description

This function returns pancreas cancer datasets from the hub and a vector of patients from the datasets that are most likely duplicates

Usage

```
loadPancreasEsets(removeDuplicates = TRUE, quantileCutoff = 0,
  rescale = FALSE, minNumberGenes = 0, minNumberEvents = 0,
  minSampleSize = 0, removeSeqSubset = TRUE, keepCommonOnly = FALSE,
  imputeMissing = FALSE)
```

Arguments

removeDuplicates	remove patients with a Spearman correlation greater than or equal to 0.98 with other patient expression profiles (default TRUE)
quantileCutoff	A numeric between 0 and 1 specifying to remove genes with standard deviation below the required quantile (default 0)
rescale	apply centering and scaling to the expression sets (default FALSE)
minNumberGenes	an integer specifying to remove expression sets with less genes than this number (default 0)
minNumberEvents	an integer specifying how many survival events must be in the dataset to keep the dataset (default 0)
minSampleSize	an integer specifying the minimum number of patients required in an eset (default 0)
removeSeqSubset	currently only removes the ICGSSEQ dataset as it contains the same patients as the ICGS microarray dataset (default TRUE, currently just ICGSSEQ)
keepCommonOnly	remove probes not common to all datasets (default FALSE)
imputeMissing	remove patients from datasets with missing expression values

Value

a list with 2 elements. The First element named `esets` contains the datasets. The second element named `duplicates` contains a vector with patient IDs for the duplicate patients (those with Spearman correlation greater than or equal to 0.98 with other patient expression profiles).

Examples

```
esetsAndDups = loadPancreasEsets()
```

OUH

OUH Study Pancreatic Cancer Dataset
